

Announcement of Participation

The **Digital Initiatives Group** at the International Training and Education Center for Health (I-TECH), a center in the University of Washington's Department of Global Health, is participating in the [Season of Docs](#), Google's annual program that fosters collaboration between open source projects and technical writers. It is happening for the first time in 2019!

Season of Docs is a unique program that pairs technical writers with open source mentors to introduce the technical writer to an open source community and provide guidance while the writer works on a real-world open source project. The technical writer in turn provides documentation expertise to the open source organization. Season of Docs is not a recruiting program nor an internship but it does provide an invaluable experience and looks great on a résumé!

DIGI implements open-source digital health solutions that help people make informed decisions to improve health outcomes in low and middle-income countries such as Cote d'Ivoire, Haiti, Kenya, and South Africa. We work with electronic medical records, laboratory information systems, human resources information systems, and other digital health tools. Our work contributes to sustainable health systems and improved population health.

Technical writers interested in Season of Docs can find the list of participating open source organizations on the [Season of Docs](#) website. The application period for technical writers is open from **May 29, 2019 - June 28, 2019**. DIGI's Ideas List is available here: <https://sites.google.com/site/openelisglobal/blog>
